The coronavirus is highly infectious. It spreads through contact with people who already have the virus – even those who do not show symptoms – or from touching contaminated surfaces and then touching your eyes, mouth or nose. COVID-19 sticks to surfaces – plastic, cardboard, metal, wood and more. It can survive for up to five days. These are some guidelines to prevent being infected and infecting others.

Research shows that across the global South, informal operators are key to the food security of low-income households. Some countries have recognised this and declared informal food traders essential service providers.

As long as safety guidelines are followed, informal traders can trade as safely as supermarkets.

**STAY AT HOME:**

Doctors advise staying at home, if you can. This is why direct income support from national government to all informal workers is critical.

- Elderly people are particularly at risk if they contract the virus. If you are elderly or live with elderly people (those over 60), you should stay at home.
- If you are unwell with an existing condition, or older than 60, you should ask someone else to run your business for you during the COVID-19 epidemic.

**POLLICY ISSUES:**

On April 2, national government declared spaza shops and informal (uncooked) food traders as essential service workers – see pg 12

**PRESSURE AUTHORITIES TO:**

- stop harassment by sending clear directives to the police and army that food traders are essential workers.
- make the issuing of permits simple and fair.
- ensure suppliers (e.g. secondary fresh produce markets) and those transporting traders’ goods are also able to operate.
- provide unlimited water points so that traders can wash their hands, workplaces and products frequently.
- provide masks, sanitizers and/or bleach as a matter of urgency.
- exempt food traders from any vending fees.
- be flexible about trading layouts so that street and market traders can practise physical distancing.
- identify unused space – fields, parking lots – where food markets can be set up. This will assist people in keeping the two-metre distance.
- be flexible with trader layouts and locations.
- give priority to high-risk customers (such as pensioners and pregnant women) by giving them preference in queues.
- ask customers not to touch products (as far as possible).

**GUILDLINE FOR INFORMAL TRADERS (in streets, markets and spaza shops)**

**The most common symptoms of COVID-19 are:**

- **Cough**
- **Fever**
- **Sore throat**
- **Shortness of breath**

If you show these symptoms, you may have COVID-19, which means it is not safe for you to be at work and you can make others sick. Most people infected with COVID-19 are able to recover at home. If you have these symptoms, seek medical attention. Call in advance. See here for more info on the signs and symptoms.

**Sore throat**

Doctors advise staying at home, if you can. This is why direct income support from national government to all informal workers is critical.

- If you are elderly or live with elderly people (those over 60), you should stay at home.
- If you are unwell with an existing condition, or older than 60, you should ask someone else to run your business for you during the COVID-19 epidemic.

**IF YOU ARE AT WORK AS AN ESSENTIAL SERVICE PROVIDER:**

1. Wash your hands with soap and water often:
   - Wash your hands for at least 20 seconds. Clean all parts of your hands and fists, washing between fingers and fingertips and halfway up your forearms.
   - Wash your hands before you start your workday, throughout the day, and especially before eating.
   - Wash your hands after coughing or sneezing.
   - Wash your hands after touching any object that others regularly touch.
   - Wash your hands as soon as you get home.

   **NOTE:** Hand sanitizers do not work as a preventative measure on dirty hands – because the virus sticks to the dirt on your hands. When you wash your hands, do not touch the tap with your hands. Open and close it with a piece of newspaper that you throw away afterwards.

2. Avoid touching your face – especially your eyes, mouth and nose. When you cough or sneeze, cover your face with the inside of your elbow.

3. Wear a cloth mask that covers your mouth and nose. Avoid touching the mask. Wash and iron after use. Have a few masks so that you always have a clean one to wear. Encourage customers to wear masks too.

4. Avoid touching people. Do not greet people by touching them. Keep two metres away from people. Where this is impossible, then at least keep at arm’s length.

5. Street and market traders need to trade two metres apart, so local governments need to be flexible with trader layouts and locations.

6. Customers should keep two metres distance from each other, by queuing alongside trader/market stalls or outside spazas. Drawing lines on the ground is a simple way to show how people should queue and how far they should stay from you and your stall/shop.

7. Give priority to high-risk customers (such as pensioners and pregnant women) by giving them preference in queues.

8. Ask customers not to touch products (as far as possible).

**HOW TO MAKE YOUR OWN DISINFECTANT:**

If you do not have sanitizers, use 1 cup of bleach in 6 cups of water. This is an effective method.

**HOW TO BUILD A WASH STATION:**

Consider building a wash station if you do not have running water on site for you and your customers. Place a basin under the tap to catch the waste water.

**POLICY ISSUES:**

These guidelines were developed by WIEGO in close consultation with experts in public health (Professors Rajen Naidoo and Leslie London) and the informal economy/food systems. April 2020.
